

1.4% of sessions end in a purchase, and most are lost before anyone views a product.

355,592 sessions · 1 Nov 2020 – 31 Jan 2021 · Google Merchandise Store, obfuscated GA4 sample

78.5% of sessions leave without viewing a product

Each step's conversion from the one before

Step	Conversion	95% CI	Skipped previous step
All sessions → viewed a product	21 . 5 %	21.4% – 21.7%	0.0%
Viewed a product → added to cart	19 . 7 %	19.4% – 20.0%	0.1%
Added to cart → began checkout	39 . 4 %	38.6% – 40.2%	46.2%
Began checkout → added shipping info	100 . 0 %	99.9% – 100.0%	0.0%
Added shipping info → added payment info	61 . 3 %	60.4% – 62.2%	0.0%
Added payment info → purchased	71 . 3 %	70.2% – 72.4%	0.1%

Read the cart step with care. 46% of sessions that began checkout, and 41% of purchasing sessions, have no add-to-cart event. That fits a buy-now path or cart events that weren't recorded; this data can't tell which. Every other step follows the one before it almost perfectly.

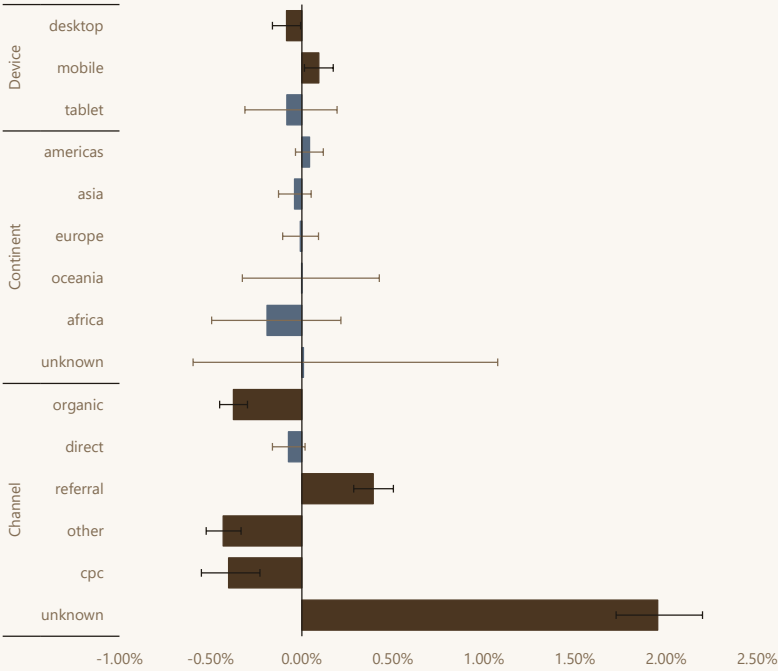

Base: 355,592 30-minute sessions, not GA4's own sessions. A session reaches a step if it contains the event. Intervals: 95% Wilson. Source: dbt model rpt_funnel.

Referral sessions convert above the rest; organic, cpc and 'other' convert below.

355,592 sessions · 1 Nov 2020 – 31 Jan 2021 · Google Merchandise Store, obfuscated GA4 sample

Funnel step **purchase**

Segments whose "purchased" rate differs from the rest of sessions

Bars: segment's rate minus the rest of sessions' rate, percentage points. Whiskers: 95% Newcombe interval. Brown: the interval excludes zero. Association, not cause.

Rates and gaps at the selected step

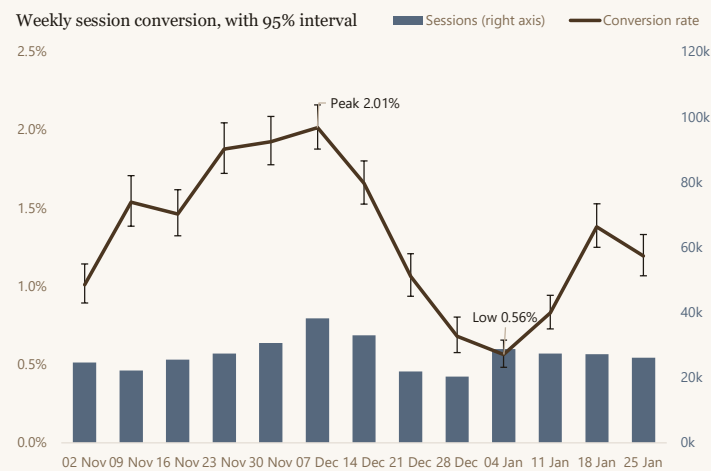

Group	Segment	Sessions	Rate	95% CI	Gap vs rest	95% CI
Device	desktop	206,354	1.33%	1.28% – 1.38%	-0.08 pp	-0.16 to -0.01
	mobile	141,352	1.42%	1.36% – 1.48%	+0.09 pp	+0.01 to +0.17
	tablet	7,886	1.28%	1.06% – 1.55%	-0.08 pp	-0.31 to +0.19
Continent	americas	196,608	1.38%	1.33% – 1.43%	+0.04 pp	-0.03 to +0.12
	asia	84,481	1.33%	1.26% – 1.41%	-0.04 pp	-0.13 to +0.05
	europa	66,291	1.35%	1.27% – 1.45%	-0.01 pp	-0.10 to +0.09
	oceania	3,745	1.36%	1.04% – 1.79%	-0.00 pp	-0.33 to +0.43
	africa	3,664	1.17%	0.87% – 1.58%	-0.19 pp	-0.49 to +0.21
	unknown	803	1.37%	0.77% – 2.44%	+0.01 pp	-0.60 to +1.07
Channel	organic	121,780	1.12%	1.06% – 1.18%	-0.38 pp	-0.45 to -0.30
	direct	82,493	1.31%	1.23% – 1.39%	-0.07 pp	-0.16 to +0.02
	referral	62,331	1.68%	1.59% – 1.79%	+0.39 pp	+0.28 to +0.50
	other	51,789	0.99%	0.91% – 1.08%	-0.43 pp	-0.52 to -0.33
	cpc	15,548	0.98%	0.83% – 1.14%	-0.40 pp	-0.55 to -0.23
	unknown	21,651	3.20%	2.97% – 3.44%	+1.95 pp	+1.72 to +2.20

Don't act on "unknown". These are sessions whose traffic source was deleted from the export "(data deleted)". They convert at 3.2% vs 1.3% for the rest, more than double. A pattern that strong in a field GA4 deleted is more likely a side effect of how this sample was anonymised than real behaviour.

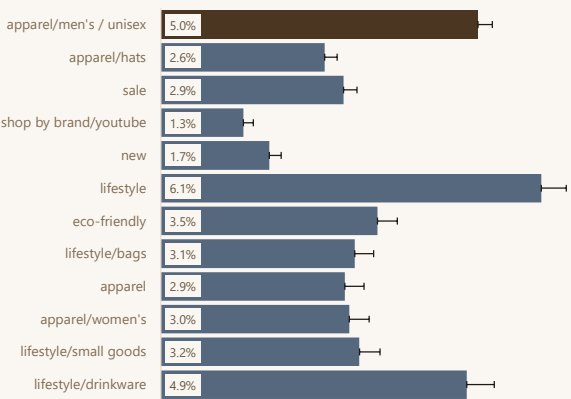

Base: 355,592 30-minute sessions. Gap = segment's rate minus all other sessions' rate (percentage points), 95% Newcombe interval. Channel = the session's first-event medium. Association, not cause. Source: dbt model rpt_funnel.

Conversion peaked at 2.0% in early December and fell to 0.6% in the first week of January.

355,592 sessions · 1 Nov 2020 – 31 Jan 2021 · Google Merchandise Store, obfuscated GA4 sample

Men's / unisex apparel turns 5.0% of its viewers into buyers and brings in 35% of item revenue

Bars: of sessions that viewed a product in the category, the share that also bought one; 95% Wilson interval. Products are matched across steps by name, because categories and item IDs differ between view and purchase events in this sample.

Base: 30-minute sessions by ISO week (Mon start); the one-day week of 26 Oct is left out. Intervals: 95% Wilson. Source: dbt models rpt_funnel_weekly, rpt_product_funnel.
